TRENVO

MUSIC TREND PREDICTOR

Know what's trending, the moment it starts.

BY

Tannu Verma

Core Features

What Trenvo brings to the table — a live, intelligent view of the music that's trending right now.

1 **Real-Time Music Dashboard**
Brings Spotify, YouTube, and social media metrics — views, streams, and searches — together on a single live dashboard.

2 **Ask Why It's Trending**
Click any song and the built-in AI assistant scans its viral news and live streaming data to explain, in simple words, exactly why it's trending.

3 **Dynamic Top 5 & Top 10 Ranking**
Ranks the current top songs using live stream counts and search engagement, along with the specific reason each one holds its spot.

4 **Singer Search**
Lets any artist search their own name to track their songs' live views, streams, and audience metrics.

5 **Artist vs Artist Comparison**
Compares two singers side by side — total engagement, fastest-growing song, and overall growth metrics — in one clean view.

6 **Weekly Trend Tracker**
Uses simple graphs to show how song rankings shift week over week, capturing how trends rise, peak, and fade over time.

How It Will Be Built

The tools and data sources that power Trenvo behind the scenes.

Tools We Will Use

Python	ML Library	Charts	API / Database
Core language for data collection, cleaning, and logic	Scikit-learn / Pandas for trend scoring and analysis	Matplotlib / Power BI for visual dashboards	Connects to Spotify & YouTube APIs, stores data

Where We Will Get Data

Spotify	YouTube	Search Trends	Social Media
Streams, popularity score, and audio features per track	View counts and growth rate of official music videos	Search volume spikes that signal a song going viral	Mentions, shares, and Reels/Shorts activity

Build Process

1. Collect	2. Clean	3. Analyze	4. Visualize
Pull raw track and engagement data from Spotify, YouTube, and search APIs.	Remove duplicates, fix missing values, standardize columns with Python/Pandas.	Engineer a trend score per song and rank artists using the ML library.	Push the processed data into charts and the Power BI dashboard.

Front Page Layout

What a user sees and can click the moment Trenvo opens.

TRENVO

Navigation buttons on the home screen:

Dashboard Opens the live real-time trend view	**Top 5 / Top 10** Jumps straight to the current top-ranked songs	**Ask Why** Opens the AI assistant for a clicked song
Singer Search Search bar to look up any artist by name	**Compare Artists** Pick two artists to compare side by side	**Weekly Trends** View the week-over-week ranking graph

Below the buttons, the front page also shows:

- A live-updating Top 5 songs strip with each song's trend score
- A search bar to look up any song or artist directly
- A small trending-now ticker pulling from the real-time dashboard

---

Trends don't stay the same — the song at #1 today could be replaced by another next week. Trenvo is built to keep up with that change, in real time.
